

Quik-Mix

Step by step how the process works.

1. A self sufficient 3 person crew turns up. This is made up of a camera operator, sound operator and vision mixer.

2. 2/3 cameras are set up, one for a wide shot of the whole room, one for a close up shot of the speaker and one optional one for a close up shot of the audience.

3. These are then connected to our Quik-Mix mixing desk along with a laptop with the slides for the presentation

4. Whilst the presentation is going on, the vision mixer, using the mixing desk, then mixes between the shots from the different cameras and the slides to produce a ready edited video of the complete presentation.
